
git-thaw(1) Manual Page

NAME

`git-thaw` - Un-freeze all changes on a frozen branch.

SYNOPSIS

git thaw

DESCRIPTION

`git thaw` takes a frozen branch (as made by [git-freeze\(1\)](#)), and returns it to the status that it was in before it was frozen.

If you freeze a branch multiple times (i.e. change files, freeze, change files, freeze), `git thaw` will thaw all of the freezes.

SEE ALSO

[git-freeze\(1\)](#).
