

# Set up remotes

---

## setup local repo

```
mkdir myrepository  
cd myrepository  
git init
```

## add bitbucket remote as "origin"

```
git remote add origin ssh://git@bitbucket.org/aleemb/myrepository.git
```

## add github remote as "sync"

```
git remote add sync https://github.com/aleemb/laravel.git
```

## verify remotes

```
git remote -v  
**should show fetch/push for "origin" and "sync" remotes**
```

# Set up Branches

---

## first pull from github using the "sync" remote

```
git pull sync
```

## setup local "github" branch to track "sync" remote's "master" branch

```
git branch --track github sync/master
```

## switch to the new branch

```
git checkout github
```

## create new master branched out of github branch

```
git checkout -b master
```
