git-mark-merge-base(1) Manual Page

NAME

git-mark-merge-base - Manually interact with depot_tools' merge-base markers.

SYNOPSIS

> *git mark-merge-base*
> *git mark-merge-base* <commit hash>
> *git mark-merge-base* [-d | --delete]

DESCRIPTION

Inspect, set or delete the current merge-base marker for the current branch. This should

not be needed, but is useful if things get into a snarled state. Pass no arguments to view the current value. If you provide <commit hash>, then `git mark-merge-base` will attempt to set that as the merge-base value.

It is invalid to pick a commit which is not an ancestor of the current branch.

See [git-rebase-update(1)](#)'s description of the `branch.<name>.base` configuration variable for more info on what the merge base markers are for.

OPTIONS

-d

--delete

> Delete the merge-base marker for the current branch.

<commit hash>

> The new value to set for the current branch's merge-base marker.
