# Adding organization members to a team

People with owner or team maintainer permissions can add organization members to teams. People with owner permissions can also invite non-members to join a team and the organization.

You can use team synchronization to automatically add and remove team members in an organization through an identity provider. For more information, see "Synchronizing a team with an identity provider group."

> In the top right corner of GitHub, click your profile photo, then click **Your profile**.

Your profile

Your repositories

Your organizations
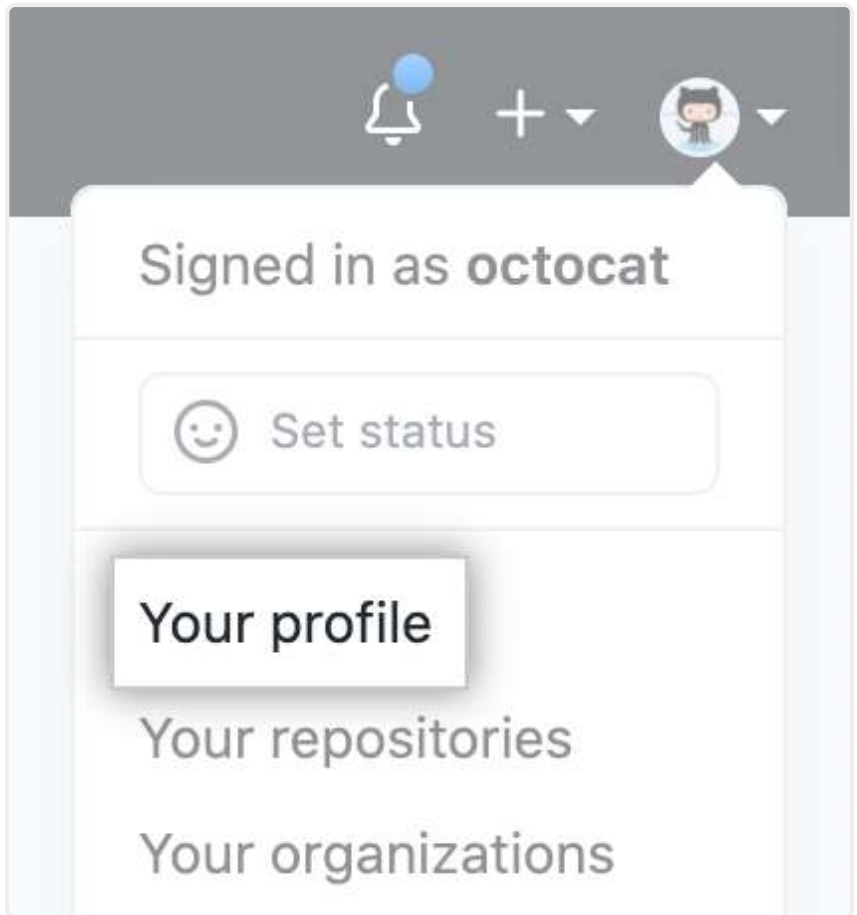

On the left side of your profile page, under "Organizations", click the icon for your organization.
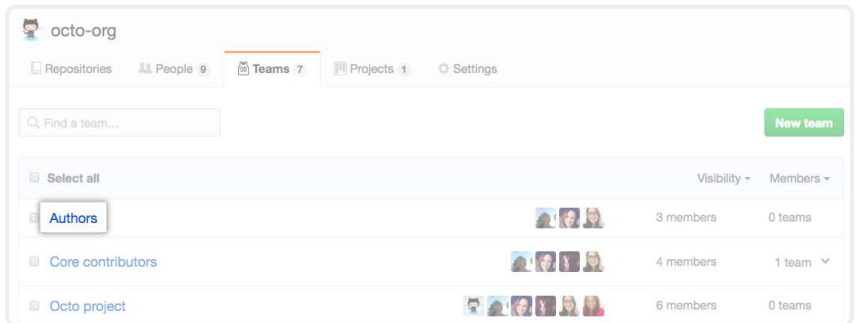

Under your organization name, click ⚇ **Teams**.
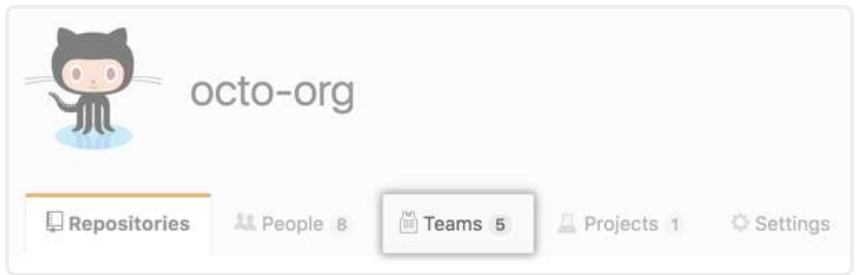

On the Teams tab, click the name of the team.

At the top of the team page, click 🏢 **Members**.

Above the list of team members, click **Add a member**.

Add an organization member to the team or invite a non-member to join a team:

- If the person you want to add is already a member of your organization, type their username and click **Enter**. The user will immediately be added to the team.
- If the person you want to add is not member of your organization, type their username or email address and click **Enter**. The user will receive an email invitation to join your organization and will be added to the team once they accept the invitation.

Review the list of repositories that the new team member will have access to, then
click **Add *USERNAME* to *TEAMNAME***.
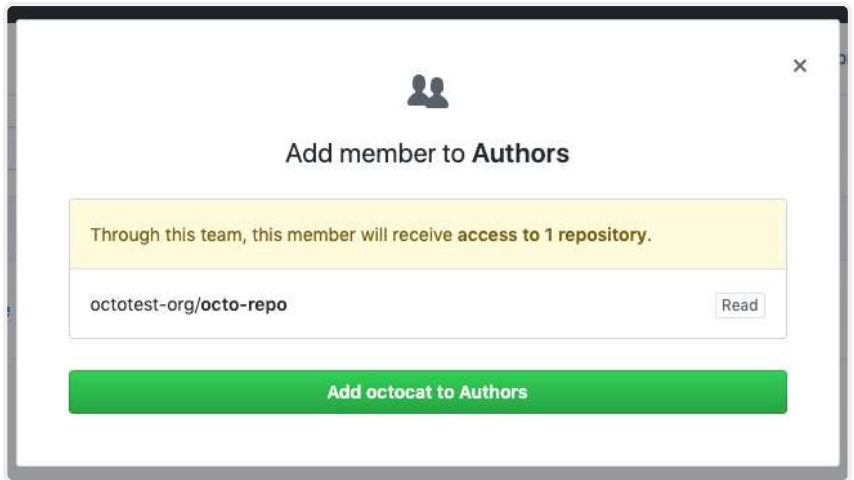

You can [edit or cancel an invitation](#) any time before the user accepts.
